EM Universal Village Project

EM Universal Village in Kitanakagusuku is a project that EMRO is undertaking based on an agreement with the Kitanakagusuku Village Office. We aim to enrich health and welfare through agriculture and to revive our community.

The first phase of the project focuses on agricultural infrastructure, which involves facilities for biogas power generation, bio-stimulant production, etc. Combining renewable energy from biogas power generation with EM technology, we aim for local production for local consumption. These facilities will be operational in 2025.

**We ask for your kind support on the EM Universal Village Project.
Stay tuned, and come visit the village where EM technology is made the best use of!!**

Creating a Village of Health and Welfare
Utilizing Agriculture
